# PHOTOGRAMMETRY OPTICAL COORDINATE MEASURING SYSTEM

Creaform's MaxSHOT 3D™ line-up is a game changer for product development, manufacturing, quality control and inspection teams that need the highest measurement accuracy and efficiency for large-scale projects and parts from 2 to 10 m. Imagine achieving accuracy better than 0.015mm/m. Gain peace of mind knowing that your measurements are always right on the dot.

What's more, thanks to sophisticated, proven user guidance technology and easy-to-use software, users of all levels—even non-metrology experts—can use the MaxSHOT 3D. Contrary to traditional photogrammetry, the MaxSHOT 3D features automatic feedback before measurement. Never take a bad image again!

If you consistently work on large-scale projects, the MaxSHOT 3D is your go-to solution to slash budget-busting measurement mistakes, improve product quality, increase process efficiency, and minimize overall operating costs.

Intuitive controls and operations for ultra-short training and learning curves

Multi-function buttons for easy interaction with VXelements software

CREAFORM

40% more accurate  
Metrology-grade volumetric accuracy of **0.015 mm/m**

Highly comfortable, ergonomic design developed specifically for photogrammetric applications

Laser projected frame with **GO/NO-GO** feedback on measurement pictures

## SEAMLESS INTEGRATION WITH OTHER CREAFORM TECHNOLOGIES

The MaxSHOT 3D integrates all of the following Creaform technologies for large-scale projects:

### HandySCAN 3D™

The truly portable metrology-grade 3D scanner that delivers highly accurate measurements

### Go!SCAN 3D™

The easiest 3D scanning experience, generating fast and reliable measurements

### HandyPROBE™

The arm-free portable probing system designed for use on the shop floor

### MetraSCAN 3D™

Fast and accurate optical CMM 3D scanner engineered for shop floor conditions

## WITH THE MAXSHOT 3D, ENSURE FIRST-TIME-RIGHT DATA ACQUISITION AND MEASUREMENTS

### NEVER TAKE A BAD PICTURE AGAIN

The MaxSHOT 3D's laser-projected frame uses simple GO/NO-GO visual feedback to let users know if the image will be good or bad. If the image is good, a green frame will appear, indicating that it can be saved for further treatment and analysis. If it's bad, a red frame will appear, prompting users to take corrective action.

### INTUITIVE SOFTWARE DIAGNOSTIC TOOLS

VXelements provides users with easy-to-understand diagnostics to guide them in carrying out the appropriate corrective actions before taking pictures.

## OPTICAL PROBING ACCESSORIES

Use your MaxSHOT 3D as an optical probing device and get direct 3D measurements for various types of features: hole location, edge location, surface points, etc.
